1.0 Introduction

Dogecoin, created as a meme parody by Billy Markus and Jackson Palmer in 2013, suddenly exploded in price and currently trading at around 30 cents with a market value of over \$27 billion dollars. The other similar coins such as a Safemoon and Shiba Inu also caught an eye of many huge investors and became multi-billion corporations with an active and vibrant communities. What Dogecoin, Shiba Inu, Safemoon and others have in common is that they are both currently rivalling some of the largest cryptos in the world and that they are meme coins.

The meme coins, or parody coins, are those cryptocurrencies which are usually either inspired by some memes on the internet or which have some funny characteristic. Surprisingly to many people, meme coins got such a huge popularity that many of them overthrew lot of utility tokens and became more successful in crypto space.

Currently more than 1000+ meme coins are listed in exchanges and attracting money from investors. According to a survey conducted by Crebaco on 1,000 new crypto investors, it seems that 91% of them had bought meme coins.

1.1 Meme ecosystem

One of the greatest differences between the more traditional cryptocurrencies, or the so-called utility coins, and meme coins is that the latter ones are mainly community-based; their growth and success depend on their supporters. Shiba Inu's founder explicitly calls the token "an experiment in decentralized spontaneous community building". Today's rise to exponential levels in the prices of meme coins is therefore attributed to a great extent to their vocal supporters. Elon Musk is a representative figure here. It seems that Musk's tweets have more than once pumped up the price of meme coins even up to 50%.

It is this background and this ideal - a project run and fully supported by its community - that gave birth to Little Meta Doge. Little Meta Doge is a hybrid token that situates itself in-between the traditional utility coins and meme coins, taking the advantages of them both.

1.2 LMD Token Overview

Little Meta Doge is a new hyper-deflationary token with a buyback and rewards function, that aims to revolutionize the Metaverse and become one of the leader in cryptocurrency space.

Project was created by an experienced blockchain enthusiast, Eduard Rublev, based in Russia. Eduard was one of the earliest adopter of Bitcoin back in 2010, since then he participated in a various Blockchain events both in Russia and abroad.

Little Meta Doge is created with one purpose - to help make the world a better place. One of our core values is “building the MetaVerse and helping the humanity”, which means our team dedicated for a success and prosperity of everyone.

Little Meta Doge situates itself in-between the traditional utility coins and the meme coins, bringing the best quality to all our investors.

1.3 LMD Utility Projects

While we wish to build a highly engaged and passionate community which is vocal and committed to our project, we also aim to develop some attractive features that our users can enjoy. Therefore, Little Meta Doge has six main utility projects:

- LMD DEX**
- NFT Marketplace**
- P2E Blockchain Video Games**
- Yield Farm and Staking**
- Lottery**
- LMD Shop & Accessories**

We are not going to stop once we accomplished those 6 tasks and will bring to the world our own wallet, casino and exchange platform. To truly become a leader in a crypto space, our final target will be creating our own blockchain partnering with the best developers and corporations.

1.4 Utilities Overview

LMD DEX

Creating our own LMD DEX will be the first step according to our Roadmap. The goal of our own Little Meta Doge Swap is to provide our community with a safe place where they can trade their crypto while at the same time promoting a decentralized architecture. By the help of our vibrant community we hope to turn LMD DEX into the ideal exchange and launchpad platform, and the home which can accommodate the new and existing projects of our members.

NFT Marketplace

We are going to create our own NFT Marketplace Platform. Using blockchain technology, the platform replaces the traditional auction house and verifies the content's source. In such a way, platform will enable NFT enthusiasts to display their NFTs and sell them either at a fixed price or through an open auction. The buyers can keep up with the NFT rankings as they are updated regularly and purchase their favourite NFT by paying directly with their wallet.

P2E Blockchain Video Games

Another project that Little Meta Doge puts forward is our own Video Game Platform. Some of the key features of any game are that it grants the player the true ownership of in-game assets and at the same time operates according to the play-to-earn principle. What this means is that whatever you win inside the game, it is yours to either keep or sell. Gamers will finally be able to immerse themselves in an exciting game while also making a profit. In our game ecosystem, players will be able to earn either LMD Tokens or any other crypto, also conveniently exchanging it to fiat, if needed.

Yield Farm and Staking

LMD Team is going to create Yield Farm and Staking platform to allow our investors to lock up their holdings for a certain period of time in order to generate more rewards through the use of Defi protocols in our smart contract.

Our community will be able to choose between 3 months, 6 months or 1 year. With our own Yield Farm platform, it will be very profitable to HODL and earn high APR based on your holdings.

Lottery

For a better community engagement and to make things more fun, we will be having a lottery every fortnight, where you can win a lot of exciting prizes. Do you want to go to Dubai? Or maybe 2 weeks family holiday in Maldives? Or you want to win Lambo? With our own LMD Lottery, your dreams will come true. You will have a much better chance to win a life-changing prize with us than playing an offline lottery near your home.

LMD Shop & Accessories

Little Meta Doge is going to develop its own community peer-to-peer marketplace that requires no middlemen and no fees. Here you can either sell whatever you want by creating your own store, or you can browse the available stores and purchase your desired item from any of the four corners of the world.

Buy our merchandise or sell your own in our marketplace using either LMD tokens or any other crypto.

1.5 Tokenomics

Little Meta Doge launch will consist of three parts: Private sale, Presale and then Fair Launch.

Private sale investors will get 10% cheaper tokens than at Launch.

Presale investors will get 5% cheaper tokens than at Launch.

Both of those groups will be airdropped tokens before we launch at Pancakeswap.

Breakdown for our Tokenomics:

Total supply: 10,000,000,000 Billion

LMD Locked in Liquidity - 100%

Buyback – 3%

Marketing – 3%

Rewards (reflections) – 5%

Lottery – 1%

Total tax: 12%

Anti-bot mechanism: ON

Buyback

Buyback feature uses transaction fees to reinvest back into itself. Whenever a sale occurs, a part of the ransom amount is used to automatically purchase tokens from the liquidity pool.

Burn

Burning process is immediately initiated through our Buy-Back feature. This creates a massive burn and guarantees the price per token will increase because each activation reduces supply and increases demand.

Rewards

Our Holders are automatically rewarded 5% of LMD rewards (reflections) using instant auto-staking feature. We love and respect our long term holders.

1.6 Liquidity pool & Safety

Unfortunately, there are too many scams in Binance Smart Chain. It's very hard to identify a real project with a bright future or just a simple honeypot or rugpull.

Because of that, Little Meta Doge decided to implement robust measures to keep our investors safe.

- **KYC** - Little Meta Doge is a registered company in Russia and operate under laws according to its current jurisdiction. Our documents and identities were checked and verified by both Tax Office and Police.
- **DOXX** – Team information is visible on website main page.
